EXPERIENCE

Freelance Web Developer

CV Semangat Mandiri – Tangerang, Indonesia

Jan 2020 – Present

- Developed and designed landing pages for companies engaged in General Supplier and Manufacturing Workshop, using VueJS, Tailwind CSS
- Collaborated with the marketing team to compile content and page structure in accordance with the company's brand identity.
- Built a responsive and high-performance optimized company profile website for Institute Global, an educational institution, with a focus on access speed and user experience.
- Developed a digital registration form system for Regional Elections, including real-time data validation and secure storage using MySQL.
- Optimized the entire website to be SEO-friendly and compatible with various devices and screen sizes.

ORGANIZATION

Community Contributor - TailwindCSS

UNPAS Web Programming Discord Server | Remote | 2023 – Present

- Actively assist community members in solving TailwindCSS-related problems, debugging, and best practices in interface design.
- Contribute to creating a supportive learning environment by answering questions, sharing references, and mentoring new members.
- Providing technical support and guidance to other developers in discussions about using Tailwind CSS.

PROJECT

AdoptMe

- AdoptMe is a web-based platform that simplifies the process of adopting animals online. Users can browse a catalog of cats and dogs available for adoption, view detailed information about each animal, and complete the adoption process by clicking the "Adopt" button. Once the adoption is complete, the animal's data is automatically recorded in the admin database for tracking and management purposes.
- **Key Features:**
- Secure user authentication, including registration and login features
- CRUD features for animal data management
- Client-side routing for smooth navigation between pages
- Pagination for displaying animal lists in a structured manner
- Integration with real-time databases for storing user and adoption data
- Responsive design that supports an optimal user experience on both desktop and mobile devices

Technology: Tailwindcss, VueJS, Laravel, MySQL
